

AUTOMATED LOGISTICS

KEN AL10

Automated load carrier for instrument racks

- ✓ Easy to use
- ✓ Easy to service
- ✓ Easy to choose

The KEN AL10 is an automated robotic logistic solution that facilitates the transport of racks between Instrument Washers, storage tables and return hatches in a Central Sterile Services Department (CSSD).

In addition, the AL10 relieves the staff from manually transporting heavy goods, allowing them to focus on other important tasks.

The AL10 ensures efficient and continuous operation with constant loading and unloading of Instrument Washers 24-hours in a CSSD.

Replacing manual trolleys with this automated solution greatly improves the work environment in the CSSD by significantly reducing noise, as well as the heavy pushing, lifting, turning and awkward working postures that the staff would otherwise have to perform.

We strive to contribute to a safer and better working environment for the employees.

HEALTHCARE

Advantages:

- Time saving
- Easy overview of flow
- Assurance of correct wash
- Optimal utilization of the machines
- Quiet working environment
- No heavy lifting, pushing or poor working positions
- Navigates safely around personnel
- Balances the workload
- Space saving
- Dynamic flow of racks through the CSSD
- Reduced need for validated programs

Technical description	Technical data
Outer dimensions min	H: 790 x W: 823 x D: 1017 mm
Outer dimensions max	H: 1050 x W: 823 x D: 1017 mm
Weight	183 kg
Capacity	1 x IQ6 rack or 1 x IQ5 rack
Control interface	Samsung tablet (service tablet)
Sealing class	IP20
Power supply options	100-240V 1 ~ +PE, 50/60 Hz
Power supply on this unit	See marketing label on the machine
Battery	Li-NMC 33,6 Ah
Transport	-20°C-70°C ≤ 80% RH. Handle with care
Storage	-20°C-70°C ≤ 80% RH. Keep in packaging until installation
Operating environment	Ambient temperature and humidity: 5°C - 40°C, ≤ 80% relative humidity for temperatures up to 31°C decreasing linearly to 50% at 40°C
